

Footnote 1 - Error correction:

The loop statement in Question 2a, 2b, 2c, 2d and 2e should be

```
for i in range(0, len(some_array)):
```

and not

```
for i in range(0, len(some_array)-1):
```

This is because `range(0, len(some_array))` returns 0, 1, 2, 3, ..., 99. This is what we want since the index of `some_array` starts from 0 and ends at 99. We don't need to deduct 1.

On a separate note:

For those who want to beautify their code, you can write `range(0, len(some_array))` as `range(len(some_array))` since the starting value of the `range()` method is 0.
